EDUCATION

Dronacharya College Of Engineering Gurugram, India

B.Tech CSE (Artificial Intelligence And Machine Learning) Expected Graduation: 2028

- **In Progress**
- **Relevant Coursework**: Data Structures, Algorithms, Computer Networks, Operating Systems, Probability, Statistics, Database Management Systems (DBMS)

OPG World School (12th Grade) Dwarka, New Delhi

Senior Secondary (Class XII) Year of Completion: 2024

- **Percentage**: 75%

R.D. Rajpal Public School (10th Grade) Dwarka, New Delhi

Senior Secondary (Class X) Year of Completion: 2022

- **Percentage**: 93%

SKILLS

Programming: JavaScript, Java, MySQL
Libraries/Frameworks: MERN Stack, NumPy, Pandas
Tools/Technologies: Git, GitHub, Linux, Postman
Core Concepts: Data Structures & Algorithms, OOPs, DBMS, Computer Networks

EXPERIENCE

Usability and Accessibility of Blockchain E-voting Systems July,2025

Co - Author Abu Dhabi,UAE

- **Published:** International Journal of Advance Computational Engineering and Networking (IJACEN)
- **Presented:** Presented research at International Research and Academic Journal Conference (IRAJ), Abu Dhabi, UAE.

Survival Analysis: A Mathematical Overview of Model, Challenges and Applications December,2024

Author Kurukshetra,Haryana

- **Presented:** International Conference on Innovative Trends in Statistics, Optimization and Data Science (IC-ITSODS-2024) Organized by Department of Statistics and Operational Research Kurukshetra University, Kurukshetra, Haryana (INDIA)

PROJECTS

Blockchain Transaction Visualizer Crypto Forensics Tool

* Built a Bitcoin blockchain data pipeline using the Blockchain.com API, processing and parsing live transaction data to reduce manual tracing effort by 40% compared to raw block explorer lookups.
* Optimized API calls by implementing response caching and field filtering, avoiding redundant fetches in transaction traversal loops and reducing average data fetch time by 35%.
* Implemented address clustering and transaction path traversal across 5+ hops in a chain, enabling forensic use cases like tracing stolen funds and identifying mixer patterns.

Search Engine with Smart Autocomplete

* Implemented a prefix-tree (Trie) based autocomplete engine that suggests results after every keystroke, reducing average search-to-result time by 50% compared to linear search.
* Integrated client-side caching for repeated queries, eliminating redundant lookups and cutting API calls by 40% for returning searches.
* Added pagination to limit result payload per request, keeping response sizes under 50KB and improving load time on large datasets.
